

ELECTRIC DREAMS

The world of electronics responds to social developments. Besides new designs, today's market boasts golden (credit crisis) and natural (sustainability) designs.

16943
BY STUDIO FRST

16943 is a technological sculpture: a TV concept that seems to levitate between opacity and transparency. The screen is designed to support both full-screen and widescreen footage, without annoying black bars or a chopped picture. The HDTV comes with a built-in DVD player, incorporated invisibly into the side of the screen.

XY
BY EISUKE TACHIKAWA

This cable concept, called XY, is a design for enhancing connections between people and between objects, drawing inspiration from natural structures of connection such as that of bones or the roots of trees. Up to three people can share music, videos or the audio output from a mobile phone. XY can also be used to wind audio cord tidily, avoiding the usual tangles.

YO
BY VICTOR VETTERLEIN

YO is a rechargeable and wireless stereo speaker docking station for digital audio players. The design intention is that a renewable energy source such as solar power, wind power, or hydroelectricity charges the battery packs when the stereo is not in use.

ZIKMU
BY PARROT

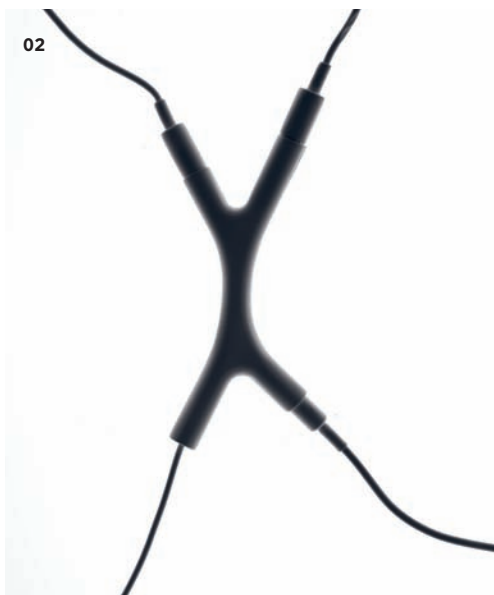

Zikmu, the new wireless speakers designed by Philippe Starck for Parrot, are both beautiful and on the cutting edge of new wireless technologies. Audio tracks can be streamed without a wire in sight, thanks to Zikmu's dedicated iPod, iPhone docking station and Wi-Fi and Bluetooth capabilities. The technical specifications and minimalist design feature the most extreme and innovative technology with the fewest possible materials to deliver maximum effect.
